Excellence

Into A World

Of Products

INNOVATIVE AND RESPONSIVE, IFC OFFERS ITS CUSTOMERS QUALITY PRODUCTS, TECHNICAL ASSISTANCE, AND RELIABLE SERVICE.

IFC is known for excellence in quality, innovation, and customer service. We've built our reputation on it, a reputation we're proud to maintain.

This standard of excellence began in the early 1900s, when our parent company, Verseidag AG, in Krefeld, Germany, started the tradition of manufacturing superior industrial fabrics. Then, in the early 1960s, IFC was founded in Minneapolis, Minnesota, as a distribution facility for Verseidag. Today, IFC and Verseidag are world leaders in the production and the development of the highest caliber industrial textiles.

Because we have research and production facilities on two continents, we have access to a vast network of information. This international alliance allows IFC to offer the most comprehensive package of the finest quality fabrics and services available in industrial markets.

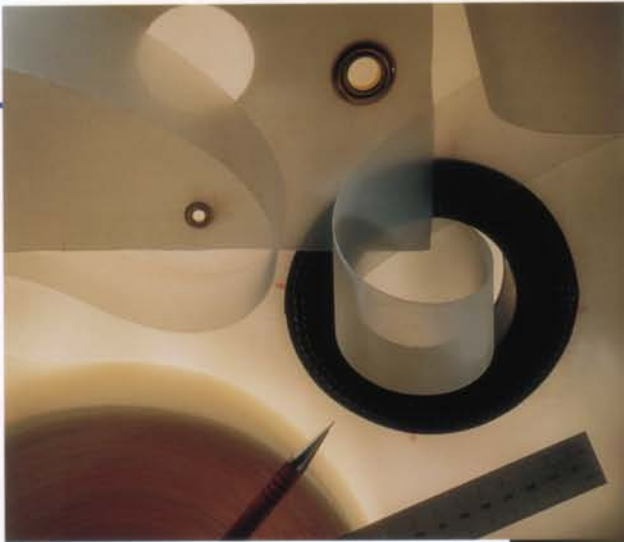

Over the years, we've maintained the tradition of manufacturing the highest quality products. We provide our customers with innovative and cost-effective ideas, outstanding technical assistance, and responsive service. IFC and affiliated companies of the Verseidag Group operate under the ISO 9000 quality system utilizing SPC and other process control procedures to assure consistency of product quality. Our customers know they can depend on us for overall excellence.

REMARKABLE VARIETY

To meet the increasing variety of applications in today's industry, IFC manufactures a broad range of belting products, as well as a vast array of technical and screen-printing fabrics. What's more, we are developing new products for the ever-emerging applications of tomorrow. Whatever the application, each of our materials undergoes rigorous testing and must comply with exacting standards so it is unquestionably the finest of its kind on the market.

FILTRATEX®

IFC filter fabrics for product separation and environmental protection are used for filter presses, vacuum belts, drum filters, disk filters, and other filtration equipment.

Left—Medical systems depend on MONODUR® precision woven fabrics for in vivo filtration, flow regulation, and blood oxygenation.

MONODUR®

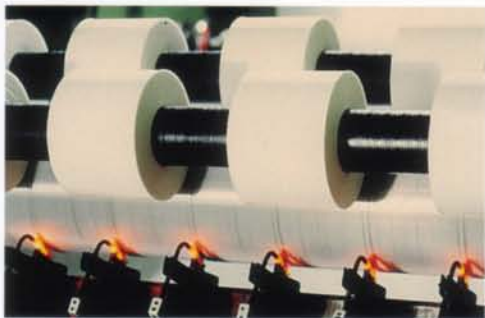

OUR TECHNICAL FABRICS are constructed of monofilament, multifilament, and spun yarns, either exclusively or in combination. Among the specialized fibers that we use to weave these versatile fabrics are nylon, polyester, polypropylene, aramid, PTFE, and carbon.

Available in a variety of weaves to fit a wide array of applications, these fibers meet and often exceed the stringent technical requirements of the automotive, medical, electronics, utilities, and chemical-processing industries.

Our special line of MONODUR® screen fabrics is woven solely from synthetic monofilament yarns to provide exceptional durability, in even the most demanding applications.

Like all of IFC's fabrics, MONODUR screen fabrics are designed to accommodate the industry's diverse requirements. In fact, the capabilities of MONODUR fabrics are almost unlimited: they are made with different diameters of yarn, different mesh openings, and different weave patterns—whatever is necessary to meet the particular demands of any given situation.

Electronically controlled equipment at all levels of production ensures the consistent quality of our products.

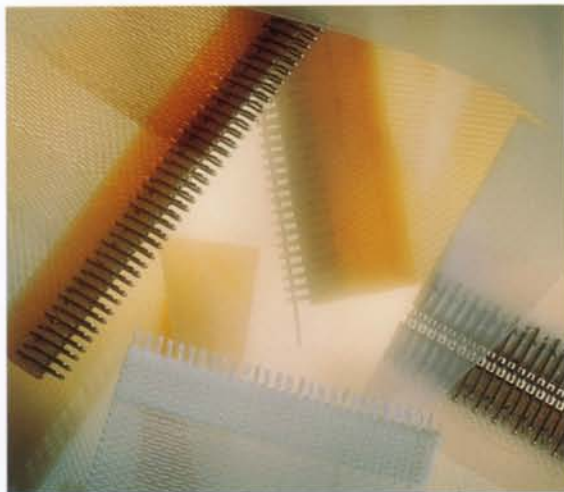

DUROTEX filter and conveyor belts for the food industry.

DUROTEX®

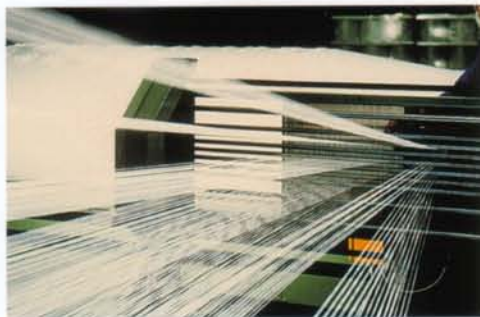

IFC'S FILTER/PROCESS FABRICS are "a cut above the rest." We have created a full range of superior filter-press dewatering belts for original process equipment manufacturers and specifiers. From food processing to wastewater treatment, from paper recycling and coal tailing to paper pulp dewatering, chemical waste removal, and fly ash dewatering, DUROTEX® Belts are known industrywide for their superior strength, flexibility, filtration, and their remarkably long life span.

Whether the job calls for polyamide or polyester, whether it requires specific separation characteristics or other defined properties, there's an IFC belt that's up to the task. Thanks to our superb R&D technicians, who test all fabrics, seams, and edges to determine—and ensure—their consistent quality, DUROTEX materials can withstand the mechanical and chemical demands of today's applications.

The right fiber, the right finish, meticulous attention to specialized seam construction and edge design—all contribute to DUROTEX fabrics being recognized throughout the world for their unsurpassed performance.

DUROTEX belt seams are recognized for their strength and flexibility—attributes that contribute to a longer life span.

MONOPRINT®

YEARS OF EXPERIENCE IN MANUFACTURING screen-printing fabrics have led to the creation of our MONOPRINT® fabrics—the “printing power” that fine printers demand and deserve. A product of the most advanced technology, IFC’s MONOPRINT fabrics offer consistency in mesh counts, thread diameters, and mesh openings. They are the quintessential high-tension, low-elongation fabrics that are crucial for accurate registration, strength, and resistance to wear and distortion. In short, their quality equals—or surpasses—that of anything else on the market.

For precise details for UV inks, clear coats, graphics, glass, electronics, multicolor fine half-tones, textiles, and myriad other high-tech printing applications, MONOPRINT screenprinting fabrics put you yards ahead!

High performance is the hallmark of all IFC MONOPRINT fabrics, and superior quality has been our tradition for a century.

WHEN YOU DO BUSINESS with IFC, you have our pledge to not only meet your expectations, but to exceed them.

Our customers know they can count on us to deliver excellence—in our products, our breadth of knowledge, our ability to create innovative solutions, and the experience and friendliness of our staff.

At IFC, we have an unwavering commitment to continuous improvement and excellence—and to weaving it into a world of products—*now* and *in the future*.
